

Run a Self-Scan with Webroot

Uh-oh! Something weird is going on with your computer.

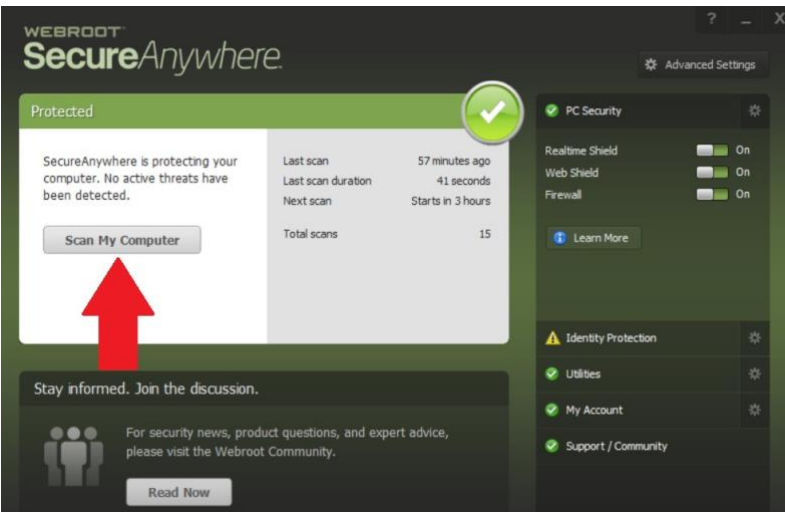

[Time to run Webroot.](#) Webroot is an Anti-Virus and Anti-Malware software program we use to protect your device. We call it “Endpoint Security.”

How to run a self-scan with Webroot:

1. In the bottom right corner of your screen, **click on the up symbol** to expand your **Systems Tray**, **right click** on the **green W** for Webroot, and select **Scan Now**.

- 2.
3. You can also go to your **Start menu** in the bottom left corner, and either **start typing Webroot** or type “**Webroot**” in the search box. When the program comes up in the list, **click to open** it, and then select **Scan My Computer**.

Once the scan completes, [click to quarantine](#) any results listed.

Now your device is safe, and you can continue working.

If you still have any concerns, please call the [ImageQuest Help Desk](#) at **615-499-7801**.
